As an already established company in Cyprus for so many years we have decided to proceed with the investment in LED lighting technology for all of our 18 shops in Cyprus. After receiving several quotation offers we have decided to proceed with the supply and installation of the LED lights with T&G Innovative Lighting Technologies Ltd. Their expertise and assistance was excellent as well as the whole cooperation we had and we are still having. T&G Innovative Lighting Technologies Ltd has performed several feasibility studies for each shop and the figures achieved corresponded to the studies made. The energy saving that was achieved reached up to 60% in terms of kWhrs and the payback period was one year. We recommend T&G Innovative Lighting Technologies Ltd for LED lighting technology.
